## WS34 Project Review

21 01 2023

## GitHub:

- The project began work a little later than December 4

Requirements: The entire structure is compiled with. Maybe you could add the user stories and an index to guide you better. The non-functional requirements can be improved and the common requirements can be improved.

## Model

## Use case Diagram

Improve the complement.  
The student should not be able to modify his data.  
Better structure and put verbs in the use cases

## Class Diagram

In the view the forms have neither buttons nor widgets, there are no aggregations.  
The compositions have no multiplicity.  
There is no dependency between packages

## UI Design

Some forms that are in the class diagram do not have their design in the Graphic Design.

In the "about" doesn't specify the button contact us

"Main" does not designed

"Principal" of the model does not designed

"Form Student" → No designed

## Clean code

The student class has the id as a string when it is as an 'int' in the class diagram.

The class "absence" does not exist in the DC

The class High School is not consistent

The class "Manga Connection" is not declared as an abstract class

Inconsistency in view, the "help" is missing

Get/Set in a forms

It has unused libraries.

La fibra de caña de azúcar es totalmente responsable con el medio ambiente.

Has commented code in Firm Activities

- It has the 3 folders of the project. "Packages"

Letter of customer/user

No signature.

Running the project

- Reming navigation, Print outs

- There is no back button

- In the teacher menu allows you to put id this does not match as it is created automatically.

- It does not make itself understood.

- Not very intuitive

Forms (input validations)

- It does not validate the names of the students

- It does not validate the IDs or emails.

- In the grades you could enter very large numbers and they were saved.

There are no warnings that you enter letters, you can write but they are not saved.

As a teacher it does not allow you to create activities. It mentions that the activity already exists when this is not true.

The item menu "Teache" does not work in main.
