RUBRIC

Strategy pattern: 6/10 ExamApp, SortingContext, SortingStrategy, Bubble, range 1-3, 4-7, 8 ... -3  
SortingStrategy -> abstract class or interface

sort abstract method  
at least two methods per algorithm -1  
QuickSort, Insertion Sort -1

GUI table: ..... 0/10  
MongoDB Collection: ... 10/10 MongoDB Collection 5 (structure), 5 (update with execution)  
working algorithms: ..... 9/10 message showing ordered array (No message -1), strategy -3)  
Clean code/principles: 7/10 MVC (-3)  
Total: 32  
Evidence

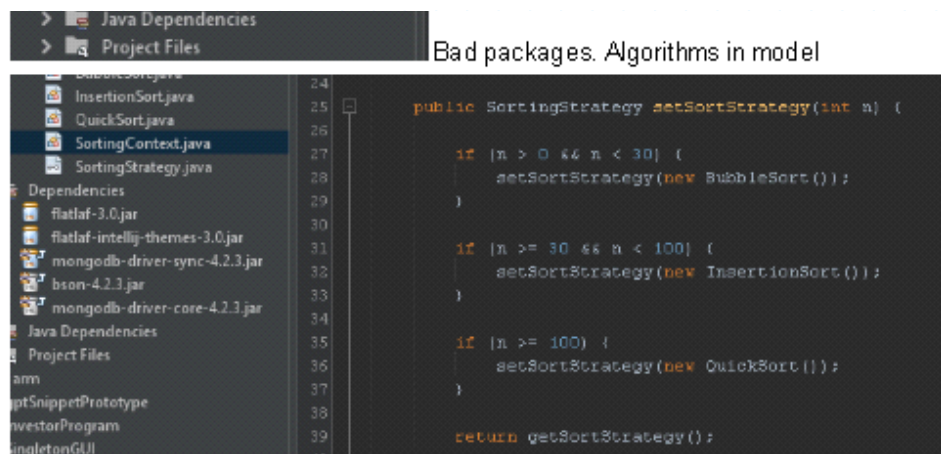

Bad packages. Algorithms in model

Bad packages. Algorithms in model

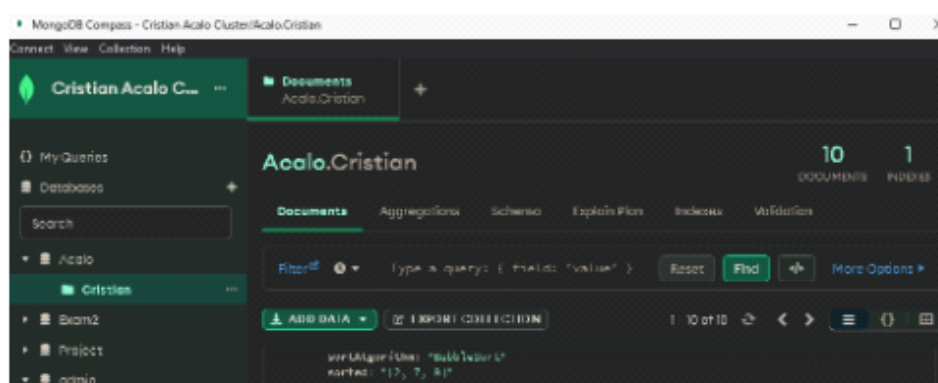

```
package ec.edu.espe.sortingProgram.model;

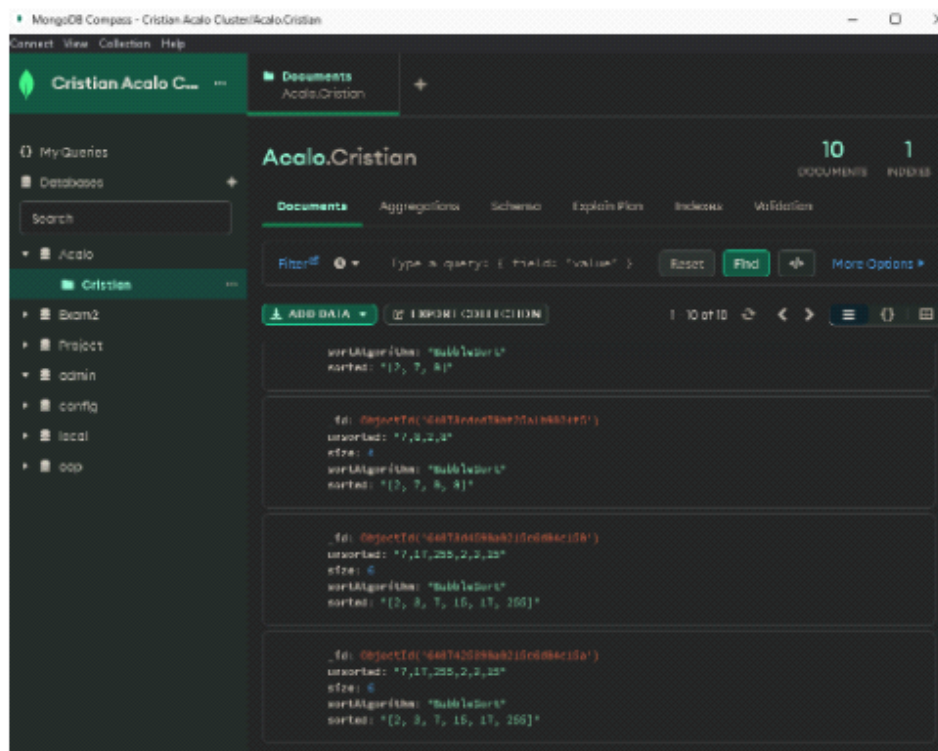

/**
 * @author Cristian Acalo, Scriptal, DCCO-ESPE
 */
public interface SortingStrategy {
    public int[] sort(int data[]);
}
```

```
/**
 * @author Cristian Acalo, Scriptal, DCCO-ESPE
 */
public class BubbleSort implements SortingStrategy {
    @Override
    public int[] sort(int data[]) {
        System.out.println("BubbleSort");

        int n = data.length;
        for (int i = 0; i < n - 1; i++) {
            for (int j = 0; j < n - i - 1; j++) {
                if (data[j] > data[j + 1]) {
                    int temp = data[j];
                    data[j] = data[j + 1];
                    data[j + 1] = temp;
                }
            }
        }

        return data;
    }
}
```

SortApp

## Sorting Program

Insert the list of numbers to sort separated by a comma (Ex: 6,5,4,7,8):

Your sorted list:

Sort

Clean

No sortAlgorithm message

```
SortingContext context = new SortingContext();
int[] sortedNumbers = context.sort(data.insertedData);

txtSortedNumbers.setText( Arrays.toString( sortedNumbers));

String sortStrategy = context.getSortStrategy().getClass().getSimpleName();

ArrayList<Integer> sortArr = new ArrayList<>();

for (int i = 0; i < sortedNumbers.length; i++) {
    sortArr.add(sortedNumbers[i]);
}

sortArr.add(sortedNumbers[i]);

Document sortDocument = new Document().append(key: "_id", new ObjectId())
.append(key: "unsorted", value: txtEnterNumbers.getText())
.append(key: "size", value: insertedData.length)
.append(key: "sortAlgorithm", value: sortStrategy)
.append(key: "sorted", value: sortArr.toString());

addSortCase( sortCase: sortDocument);
```

Maybe this should be a method in a controller class.

```
addSortCase( sortCase: sortDocument );
```

Maybe this should be a method in a controller class.
